

Datacenter Explorer: application architecture

Browser -> Sites dispatcher -> Worker -> D1 -> controlled OpenAI -> validated cited response

Approved World Bank adapter: editor refresh only; validated imports retain historical reporting period and retrieval time.

Adviser: authorize, rate-check, retrieve current D1 snapshot, calculate, call provider, validate citations, persist actual usage.

Untrusted source text cannot grant permissions. No passwords, arbitrary URL/SQL tools, transcript retention or client secrets.

Unknown inputs keep INSUFFICIENT EVIDENCE visible. Logs retain request/revision/hash metadata, not raw sensitive content.
